

MAYHT

WE'RE HIRING

Full time Prototyping Engineer

ABOUT US

The mission of Mayht is to provide the world with high quality full range sound, in the most desirable compact form factor. Through our new disruptive technologies, speakers can be up to 16x more powerful without compromising in quality, size or price point. A flat TV with home-theater sound quality, a pocket-sized bluetooth speaker with enough power to enjoy music during a picnic, a soundbar without the need of a big subwoofer, a lightweight powerful speaker for a band to fill the biggest room with an immersive music experience: all the sound, in the most attractive form factor. In the end, it is not about the speaker, but about amazing sound that fits every situation in the most compact form factor possible.

Our vision is that Mayht will become the industry standard; the most powerful bass solution available in any audio-enabled device. The world will get used to a high quality full range sound experience, made possible by Mayht's technology platform.

You are going to assemble Mayht driver prototypes with great care and precision, following the specific assembly steps that are established by the Development Engineering team and you. Next to that, you will assemble prototype products with Mayht drivers inside. Glueing, soldering and everything related to putting products together with great care is your greatest passion.

REQUIREMENTS

- Graduated Technician (MBO, HBO)
- Skilled in precision assembly of prototypes
- Love to prototype new mechanisms and test components
- Can teardown and reverse engineer product assemblies
- Prepare presentations and report on progress at internal meetings
- Excited to work on seriously impactful projects for/with market-leading tech - and audio companies
- Available for 5 days a week

HBO education only requirements:

Fully analyse the assembly steps and parts, and make recommendations for product (architecture) improvement.

WHAT WE OFFER

- Team that is able and willing to maximize your potential. We want to know how you want to grow, and will help you achieve your personal/professional growth goals
- The chance to work on the greatest disruption in driver technology of the past 75 years
- A very entrepreneurial environment where your input will be valued and visible in globally used product
