WE'RE HIRING

Full time sourcing and Administration

ABOUT US

The mission of Mayht is to provide the world with high quality full range sound, in the most desirable compact form factor. Through our new disruptive technologies, speakers can be up to 16x more powerful without compromising in quality, size or price point. A flat TV with home-theater sound quality, a pocket-sized bluetooth speaker with enough power to enjoy music during a picnic, a soundbar without the need of a big subwoofer, a lightweight powerful speaker for a band to fill the biggest room with an immersive music experience: all the sound, in the most attractive form factor. In the end, it is not about the speaker, but about amazing sound that fits every situation in the most compact form factor possible.

Our vision is that Mayht will become the industry standard; the most powerful bass solution available in any audio-enabled device. The world will get used to a high quality full range sound experience, made possible by Mayht's technology platform.

You will be responsible for ordering and handling of parts for prototyping and (small) series production for the Mayht driver technology platform. You will be responsible for the prototyping and production budget and negotiation with several (overseas) suppliers.

REQUIREMENTS

- Supply chain experience with cross functional teams in a consumer electronics product company
- Excellent verbal and written skills in English; Mandarin is a plus
- Sharp and insightful: learns quickly and is able to apply new knowledge immediately
- Able to work with Excel and make reports of the budget, (preferred) suppliers, and supplier relations
- Great negotiation skills
- Available for 5 days a week

WHAT WE OFFER

- Team that is able and willing to maximize your potential. We want to know how you want to grow, and will help you achieve your personal/professional growth goals
- The chance to work on the greatest disruption in driver technology of the past 75 years
- A very entrepreneurial environment where your input will be valued and visible in globally used product
